

WCS Disposal

WCS Disposal Benefits

- Sub-Grade Design = Erosion is avoided
- Natural Claystone Barrier = Less porous than concrete
- Arid Climate = No moisture in closed cells
- Groundwater = 500 feet below disposal, non-potable
- Long-term stability

Above-Ground Landfill

Above-Ground Landfill Benefits

- Low cost to construct
- Above the water table if shallow water is present

Concerns

- No natural barriers to water migration
- Susceptible to erosion
